Reiner Knizia

Reiner Knizia is one of the world's most successful and prolific game designers. More than 600 of his games and books have been published worldwide in over 50 languages. He has a Master of Science degree from Syracuse University (USA) and a PHD in Mathematics from Ulm University (Germany).

In his eyes, a successful game leaves everyone a winner, as the enjoyment of playing together is rewarding and inspiring, whatever the outcome of the game.

Components

1 double-sided game board

56 mouse chips (incl. 7 spare chips)

1 wooden cat

3 wooden dice with 6 different faces:
Bread, Fish, Cucumber, Cheese, Carrot and the red X

/pegasusspiele

Hi, I am Charlie, the house mouse. My wife Carlotta and I are hosting a big family gathering – and everyone is coming! I really want to make sure that everybody will have enough to eat during their stay - so I have to start gathering a supply! However, to be honest: I do not think I can do that on my own! Can you help me gather all the food we need out of the pantry of the Smith family (that's the name of the human family, where we live) and into my home? There is a little twist, though, I almost forgot to mention: We have to be very quick about it! The Smiths have a really mean black family cat – and I am sure she does not like us taking their food out of the pantry…

By the way, do you want to see how I look like? Look here to the left – you can see me juggling with dice. Pretty sweet, right? But no time to dawdle!

Will you help me?

Game setup

Put the mean black cat here.
1. Take the big folded game board out of the box and put it on the table. Do you see the head of the big mean cat in the lower left corner? Directly to the right of her, on the brown kitchen counter, there are 1 or 2 of her white paws. For your very first game, use the side of the board with just 1 white paw.

2. Now put the wooden version of the mean cat on this white paw.

3. Also take all the round mouse markers (these are the ones showing my face) and put them next to the game board.

4. The bravest of you takes the 3 dice into their hand! Yeah, now we are ready to go!

It is the aim of the game to gather all pieces of food,
before the black cat chases you out of the pantry!

Thank you for helping me. Together, we now have to manage to gather all the pieces of food from the pantry into my home. How we do that, you ask? It's simple: The bravest of you, who has the dice in their hands, will now roll the dice on the table. You did that? Well done! Now:

What can you see on the dice?

That's how you put the dice on the food item spaces.

On 5 sides of the dice you can see 1 type of food symbol - Bread, Fish, Cucumber, Cheese or Carrot. These are the same 5 types of food you can see on the game board. Each food item on the board consists of 2-4 bite-sized "pieces" – these are the square spaces on the game board. If a die shows a certain type of food, then this is very good:
it allows us to prepare the transport of 1 piece of a food item into my home. To do that, you have to place a die with a matching food symbol onto an appropriate square food item space.

Variant

For a more challenging game

You want a bigger challenge? Well, then try this: Instead of placing each die on a matching food space of your choice, you have to follow an additional restriction:

All dice on the game board have to be placed in either the same row or the same column (they have to be on the same "line").

If the first die is placed according to the example then the other dice have to be placed in either the same column (a) or alternatively in the same row (b).

Important: Even though only one of you rolled the dice, you have to decide where to place the dice together. Talk to each other to decide where to best place the dice!

Nothing good comes from that, let me tell you! If one of the dice shows a red X then that die cannot be placed on the game board for now.

But here's the twist: Once you have rolled the dice you must be able to place at least 1 die on a piece of food for each roll you make. You are allowed to place 2 at once or even all 3 at once. If all 3 dice are placed you can immediately continue to step B) Gathering the food.

But if you cannot or do not want to place all 3 dice on the pieces of food all at once (for example because there is a red X showing or all of that food has already been gathered), you may choose how you would like to continue: A) Re-roll, B) Gathering the food.

A) Re-roll
After you have rolled and placed at least 1 die you can decide to re-roll the rest of the dice that have not yet been placed. And then you must again place at least 1 of those dice on 1 food item space. If you have re-rolled 2 dice, you can still just place 1 of them and decide to re-roll the last one once more. But beware – you cannot roll the dice that are already on food item spaces on the game board.

And here's the twist again: It can happen (even on your very first roll) that you cannot place at least 1 of these dice on any piece of food. That means you are not allowed to gather any food this turn, and there is worse to come! You have to move the big mean family cat 1 space closer to the pantry – oh my! To do that just follow the paws from space to space starting from the white paw(s). Then, give the dice to the friend on your left, for them to try their luck.
That's how the cat moves from the kitchen to the pantry.

B) Gathering the food

If you have managed to place all 3 dice on the game board, or have stopped rolling and pushing your luck, you can now start gathering the food: exchange each die on the game board with 1 of my mouse chips. The mouse chip tells you that you have already gathered that piece of the whole food item and that you can no longer place a die on that square.

Do you have to move the cat now? If you have covered the last square of a whole food item, meaning that every piece of food of that one food item is now covered with mouse chips, you do not have to move the cat . If you have not managed to put a mouse chip on the last piece of food of a whole food item this turn, then you have to move the mean black cat 1 space closer to the pantry.

If you have managed to put a mouse chip on the last piece of food of a whole food item this turn, then you do not have to move the mean black cat closer to the pantry you have gained valuable time.
Finally, give the 3 dice to your friend on the left, it is their turn to roll the dice!

Did you manage to gather all the food before the mean black cat reaches the pantry? Awesome, we have really done it! Thanks to your mouse-tastic help we have managed to secure enough food for my whole big family (and really given that mean cat a run for its money). Let's try that again!

Game end

The mean black cat has reached the pantry? I am sure we can do better next time. But thanks to your heroic help we could at least secure some food from the pantry and my family will not have rumbling tummies.

You are mouse-heroes already and this is all so easy for you? Then just flip the game board to its other side (remember: this is the side with the 2 white paws next to the cat). Then put the wooden cat on the 2 white paws for the next game. Now you have to help me gather bigger food items consisting of 2-5 pieces! This is going to be much harder!

If you have managed to gather all pieces of food your success can be measured by how many steps away from the pantry the cat still was the very moment you have won (the last move into the pantry counts as 1 move):

6 or more spaces: Incredible! Prove this was not a fluke of luck by achieving the same result again right now, and then you can surely call yourself „Mice of Legend"!

5 or 4 spaces: Extraordinary! You are happy and not in a hurry to leave.

3 or 2 spaces: Well done – you really helped out Charlie!

1 space: Phew, that was close! But at least you are not going home empty -handed.

If the cat has entered the pantry, not all was lost – you can now gauge how close you were to winning:

1 piece of food left: You almost finished, don`t worry.

2 or 3 pieces of food left: Charlie did not get all he needed. But at least nobody went home hungry.

4 or 5 pieces of food left: You really did not get much. This better be better next time.

6 or more pieces of food left: The pantry is still brimming with food. Show that you can do better – off to another venture into the pantry!

Flowchart of a game turn:
